INDEX

Nature Magazine Vols. 1-20; 1923-1932.

THIS INDEX is mainly compiled from the separate ones that have accompanied each volume since 1924; volumes 1 and 2 (1923) have been newly indexed for this work. Due to exigencies of space in the case of several of the volumes, the indexes as printed were more or less incomplete. In the present work, all matter so lost has been restored, as far as was possible, and all errors detected have been corrected.

The segregation under subjects of all references and reviews of important books and papers should justify the extra work that this feature entailed. Cross references have been carefully made, preference being given to the common names of species. A special feature, in the case of the larger groups, has been the gathering of all references under one head. Examples are the repetition of falcon, kestrel and kite references under Hawk, and redstart and water-thrush under Warbler.

SYMBOLS.—Volume references are in bold-face Arabic followed by colon, and the pages in light face figures, thus: **1** (2): 27, or **18**: 55. The figures in parentheses following Vol. 1 refer to the monthly issues, and are necessary because these were paged separately. The entries in parentheses following page figures, especially those more commonly used, have been much shortened, and punctuation has been reduced to the minimum. Thus 15-18 (gen, fig), signifies that the subject has received more or less general treatment and is illustrated. Other symbols include col.-colored; biog-biography; rev-review; frontis.-frontispiece. Explanatory notes less commonly used are generally spelled out. Author Index on page 41.

Put Your Ten Year Index To Work

Bound volumes of NATURE MAGAZINE contain a wealth of fascinating stories about BIRDS, ANIMALS, FISH, PLANTS, INSECTS, TREES and other phases of Nature and the out-of-doors. Many of the volumes have marvelous full-page color reproductions of Nature Paintings bound in them.

These volumes form a veritable encyclopedia of scientifically accurate information on Nature subjects unobtainable elsewhere at any price. The TEN YEAR INDEX now makes all this data easily accessible. **But in order to enjoy the full advantages of this index, those using it should have a complete set of available bound volumes.**

Are you going to find

BOUND VOLUMES OF NATURE MAGAZINE

missing from your files when you most need them?

Two volumes have been published yearly since January, 1923. Six issues of NATURE MAGAZINE, beginning with January and July issues each year, have been bound into attractive books with dark green cloth covers, lettered in gold. **Volumes I, IV and V have been completely sold.** Copies of all other volumes, seventeen in number, are still available. The supply of some of these is limited.

Volume XX, specially bound, contains a copy of the TEN YEAR INDEX at no extra cost.

MAIL ORDER TODAY

For volumes required to complete your files

One Volume	$3.00
Two Volumes	5.00
Five Volumes	10.00
